How does Workflow approval routing work?

Transactions that are manually generated in Mosaic’s various modules must route through the workflow system in order to be approved by the appropriate manager(s).

Workflow routing is determined by both the fund type that is being used, **AND** the type of transaction processed. The diagram below summarizes how transactions make their way through workflow. Have questions? Email finwrkflow@mcmaster.ca.

Prepared for the November 2015 Financial Forum. See also Documentation Tab in Mosaic portal.
